Computer Information Systems
The computer information systems (CIS) program combines knowledge of leading-edge technologies and systems methodologies with an understanding of the ever-changing, dynamic business environment. It attracts students who are interested in working with technology to find solutions to business problems and to analyze and optimize existing business processes and information systems.

Program Educational Objectives
The educational objectives of the CIS program are to produce graduates who: (1) meet their professional goals, (2) continue to be life-long learners and (3) meet their employer or continuing education expectations.

Student Outcomes
The CIS program of study enables students to achieve, by the time of graduation:
A. An ability to apply knowledge of computing and mathematics appropriate to the discipline;
B. An ability to analyze a problem and identify and define the computing requirements appropriate to its solution;
C. An ability to design, implement and evaluate a computer-based system, process, component or program to meet desired needs;
D. An ability to function effectively on teams to accomplish a common goal;
E. An understanding of professional, ethical, legal, security and social issues and responsibilities;
F. An ability to communicate effectively with a range of audiences;
G. An ability to analyze the local and global impact of computing on individuals, organizations and society;
H. Recognition of the need for, and an ability to engage in, continuing professional development;
I. An ability to use current techniques, skills and tools necessary for computing practices;
J. An understanding of processes that support the delivery and management of information systems within a specific application environment.

Internships
After a student completes the sophomore year, he/she is eligible to apply for a computing internship. As an intern, the student is able to put into practice his/her knowledge of the field in a real job situation. Internships help to prepare students for immediate employment upon graduation.

Admission Information
Admission to the program is open to entering freshman and transfer students. Students with an educational background related to CIS who apply for admission to the program will be evaluated on an individual basis.

Employment Opportunities
CIS is one of the few academic disciplines today that can prepare graduates to meet the challenges posed by the widespread outsourcing and off-shoring of technical work. The demand for professionals equipped with the leadership, project management and interpersonal skills found in most computing programs is skyrocketing. Proof of this is found in the average salaries that professionals in CIS earn:
- Database Administrators: $77,080
- Network and Computer Systems Administrators: $72,560
- Information Security Analysts: $86,170
- Computer Systems Analysts: $79,680
- Computer and Information Systems Managers: $120,950

University Resources
CIS is housed in the Mathematics, Computer Science and Information Systems Department, where there is a close, personal involvement of dedicated faculty typical of a smaller institution, with the ever-present focus on teaching excellence, as is the tradition at Cal U. At the same time, the department offers state-of-the-art technology found at larger universities. Our high-tech classrooms and modern facilities allow many of our courses to be taught in computer laboratories. Emphasis is placed on learning technologies that are in demand in the marketplace. Wireless connection is available throughout the university, including residence halls and campus buildings. Many faculty members use course management packages that give students a common, cross-campus learning environment. This environment allows students to access current grades, upload homework and communicate with fellow classmates. While the faculty embraces this technology, they are also available to talk one-on-one with students outside the classroom. Students are our primary concern.

Accreditation
The program is accredited by the Computing Accreditation Commission of ABET, www.abet.org. All graduates of the CIS program will receive accredited degrees.

BACHELOR OF SCIENCE
COMPUTER INFORMATION SYSTEMS —120 CREDITS
A total of 120 credits are required for a Bachelor of Science degree in CIS. The following schedule of courses provides a recommended framework for completing this program of study in four years. To ensure that they are making satisfactory academic progress, students should consult with their faculty advisor, to ensure that they complete necessary prerequisites and required courses in sequence and complete between 12 and 18 credits each semester.
### Freshman Year – 31 credits

**First Semester** ................................................................. 16 credits
- CIS 110 Intro to Information Systems ........................................ 3 crs.
- CIS 120 Application Programming I ........................................... 3 crs.
- ENG101 English Composition I (or)
  - HON 150 Honors Composition I ........................................... 3 crs.
- MAT 281 Calculus I .............................................................. 3 crs.
- PSY 100 General Psychology .................................................. 3 crs.
- UNI 100 First Year Seminar (or)
  - HON 100 Honors & University Orientation ............................ 1 cr.

**Second Semester** .................................................................. 15 credits
- BUS 100 Intro to Business ...................................................... 3 crs.
- CIS 220 Application Programming II ....................................... 3 crs.
- ENG 217 Sci & Tech Writing (or)
  - PSY 100 General Psychology ................................................ 3 crs.
- General Education Course ...................................................... 3 crs.
- Free Elective Course .............................................................. 3 crs.

**Sophomore Year – 31 credits**

**Third Semester** .................................................................. 16 credits
- ACC 200 Financial Accounting .................................................. 3 crs.
- CIS 341 CISCO CCNA 1 .......................................................... 4 crs.
- MAT 215 Statistics (or) MAT 225 Business Statistics ............... 3 crs.
- COM ___ Public Speaking Course (See Menu) ......................... 3 crs.
- General Education Course ...................................................... 3 crs.

**Fourth Semester** ................................................................. 15 credits
- CIS 299 Systems Analysis I ....................................................... 3 crs.
- CIS 302 Visual Programming .................................................... 3 crs.
- ECO 201 Introductory Microeconomics .................................... 3 crs.
- General Education Course ...................................................... 3 crs.
- Free Elective Course .............................................................. 3 crs.

**Junior Year – 30 credits**

**Fifth Semester** .................................................................. 15 credits
- CIS 330 Web Programming I .................................................... 3 crs.
- CIS 354 Systems Project Management ....................................... 3 crs.
- MGT 300 Principles of Management ....................................... 3 crs.
- CIS Elective Course .............................................................. 3 crs.

**Sixth Semester** .................................................................. 15 credits
- CIS 322 Database Application Development .......................... 3 crs.
- CIS 352 Global, Economic and Social Ethical Issues in Computing 3 crs.
- MKT 300 Principles of Marketing ............................................ 3 crs.
- CIS Elective Course .............................................................. 3 crs.
- Related Elective Course .......................................................... 3 crs.

**Senior Year – 28 credits**

**Seventh Semester** ................................................................ 15 credits
- CIS 490 Systems Analysis II ...................................................... 3 crs.
- CIS Elective Course .............................................................. 3 crs.
- General Education Course ...................................................... 3 crs.
- Related Elective Course .......................................................... 3 crs.
- Free Elective Course .............................................................. 3 crs.

**Eighth Semester** ................................................................. 13 credits
- CIS 492 Systems Development & Implementation .................. 3 crs.
- CIS Elective Course .............................................................. 3 crs.
- Free Elective Courses ............................................................ 7 crs.

Note
- The policies and procedures described here may be reviewed and revised as the need arises. This fact sheet should be used as an information guide.

### Program Contact Information

Contact the Department of Mathematics, Computer Science and Information Systems by phone at 724-938-4078.
